Firststar?

It's a question we get a lot. The name may be new, but we're no stranger to dental equipment. We've been manufacturing for some of the biggest names in the dental industry for over 20 years meaning if you have teeth, you've probably sat in one of our chairs. We know what makes the industry tick but also where it can improve which is why we're here to simplify the equipment process - from selecting the right set ups to getting world class support. Regardless of which product you choose you can rest assured that if it's got our logo on it, we've got you covered with thoughtful designs, proven reliability, and a solid standard warranty.

Family Matters since '93

We take our family work culture literally. Since 1993, Firststar has been a family owned and operated company spanning two generations, six buildings, and a whole lot of love. We are your friendly neighborhood dental equipment manufacturer in Kent, Washington and just like your favorite family pasta chain - when you're here, you're family.

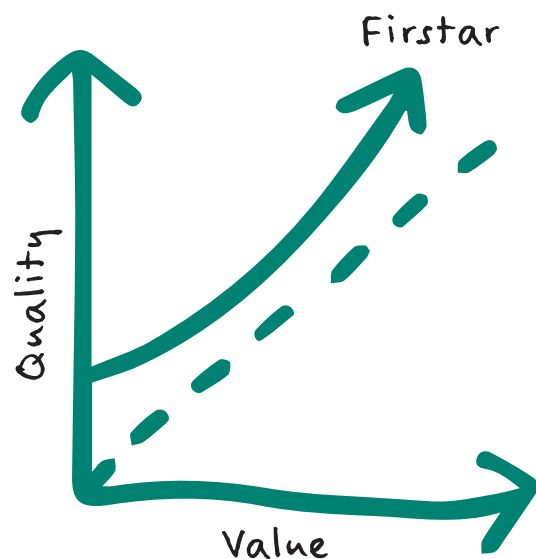

The Firststar Difference

- 1 More standard features eliminates ordering guesswork
- 2 Decades of industry research, iteration, and refinement
- 3 Dependable five year standard equipment warranty
- 4 Simplified installation process your technicians will love
- 5 One of only three manufacturers globally of medical equipment hydraulic pumps
- 6 Dentist, not profit centered design decisions
- 7 Direct control over production results in shorter lead times
- 8 We won't spam your email with marketing

Value That's Off the Charts

We tried to make a graphic showing how much value our products offer but it simply couldn't be done. We sweat every detail from material selection down to the machine tolerances because we know the separation between good and great is hidden in the minutiae,

Features

- 1 Award-winning hydraulic system with soft start/stop.
- 2 New locking swing down armrests with single hand activation.
- 3 Dual articulating push button head rest for better access to the oral cavity.

FDC50 - The Evolution

The pinnacle in patient access, versatility, and comfort. The FDC50 is the big brain move when you're after the latest in patient comfort and practical ergonomics. We've been in the equipment game for some time, and the FDC50 is our pièce de résistance.

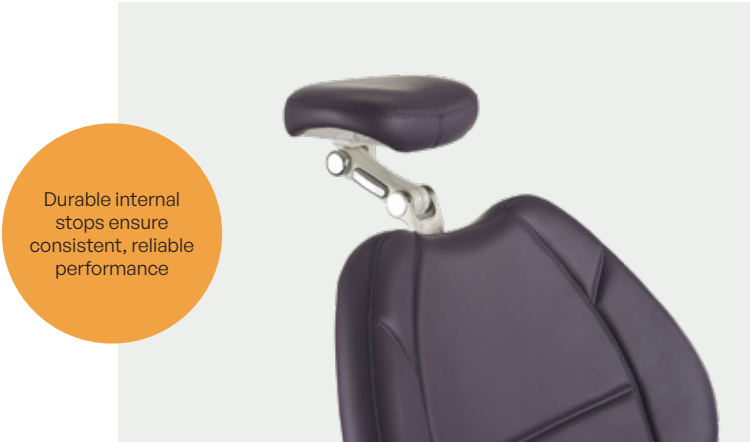

We pulled out all the stops when designing the 50, building upon our award winning hydraulic system adding soft start/stop and giving it the most modern recline movement.

Your patients will be lulled asleep and won't be awakened as you reposition them. Our new locking swing down armrests are disengaged with a single hand improving workflow and ergonomics.

Speaking of which, we also kept the dual articulating push button head rest further improving patient positioning to give you optimal access to the patient while you work. The FDC50 is so comfortable we wouldn't fault you for putting one of these in your living room, either as furniture or a piece of art.

Thin, tapered backrest gives ample room for your legs while working

FDC38 - Never go without

The FDC38 is a prime example of Firstar's build quality. You won't find plastics in any of the chair structure meaning maximum rigidity and longevity for you and your patients. Our classic thin aluminum backrest that tapers in width maximizes space for your legs while working the oral cavity but offers plenty of support for your patient.

With every FDC38, you and your practice get peace of mind, proven reliability, and incredible value. The only thing we don't include are the patients.

A solid workhorse that moonlights as a show pony, the FDC38 is feature rich and built upon Firststar's proven hydraulic drive system. Designed to maximize flexibility and patient access the FDC38 swivels 50 degrees and can be paired with either of our delivery systems or used on its own with a cabinet or cart mounted delivery.

Available in a wide selection of colors in both Naugasoft and optional Ultraleather®.

Firststar LED Lights

Improve your infection control with our LED lights, featuring touch free sensor activation and intensity adjustment. With the wave of a hand you can change the brightness level, switch between standard illumination and composite mode, and turn your light on and off. Providing an estimated 40,000 hours of energy efficient bulb life, our LED dental lights will illuminate your path to successful treatment.

Enhance your ability to assess and diagnose with our LED lights that help you see more clearly with truer colors. Our lights benefit your whole team by offering enhanced illumination of the oral cavity and energy efficiency over traditional halogen bulbs paired with ergonomic mounting and smooth three axis head movement.

Our RL-206 and RL-208 lights also feature a composite mode, giving you additional time when working with composites.
